

Call for Papers

Second Special Issue
U.S. JGOFS Synthesis & Modeling Project
in Deep Sea Research II - Topical Studies in Oceanography

The US- JGOFS Synthesis and Modeling Project invites manuscripts to be submitted for publication under the following theme:

"The synthesis of U.S. JGOFS and related data sets and modeling of ocean biogeochemistry with respect to the ocean carbon cycle and the controls on ocean atmosphere carbon partitioning".

The **deadline for submitting manuscripts has been extended to 30 April 2002**. We so far have a list of about 15 titles from authors who intend to submit to this issue. In order to keep this special issue on track, we will accept manuscript through 30 April (this is a one-month extension), or until we receive 12 manuscripts - whichever comes first.

If you are interested in submitting a manuscript, and have not yet contacted Joanie Kleypas, please do so. Please keep in mind that we consider all papers that fall along the goals of the Synthesis and Modeling Project, and papers are not restricted to SMP investigators.

Detailed information about this issue can be found at:
